***Reasons for Allowance***

1. Claims 1-6 and 9-12 are allowed.
2. The following is an examiner's statement of reasons for allowance:
3. Claim 1 is allowable because the prior art of record does not teach or fairly suggest an ignition device for bus connection comprising all the features as recited in the claims and in combination with the first and second silicon chips being completely enclosed within and supported by a single synthetic resin body such that the first silicon chip is supported independently of the second silicon chip, and wherein the synthetic resin body has an opening defined therein, and said ignition element is disposed in said opening in contact with an igniting agent.
4. Claim 2 is allowable because the prior art of record does not teach or fairly suggest an ignition device for bus connection comprising all the features as recited in the claims and in combination with the silicon chip, the communication/ignition circuit, and the ignition element being completely enclosed within and supported by a single synthetic resin body, the synthetic resin body having an opening defined therein, and said ignition element is disposed in said opening in contact with an igniting agent, a casing which houses the ignition package therein, the casing having a single open end,

and a header disposed in the casing, the header configured to close the open end of the casing the header supporting the synthetic resin body within the casing.

5. Claims 2-6 & 9-12 are allowable as they depend from claims 1 & 2, which are also allowable.

6. Beukes et al. (US 6,085,659) discloses an electronic explosives initiating device wherein a first and second chip are supported by a header (32) the first chip containing a communications circuit and the second chip containing an ignition device. However, the header does not completely surround the device.

Adams et al. (US 6,166,452) discloses an igniter wherein a header is configured to close the opening of a casing. The header contains a synthetic resin but the resin does not support a chip containing the communications circuit and ignition device.

Duguet et al. (US 6,418,853) discloses an igniter wherein a header (32) closes a casing (33) with first and second chips. However, the chips are not supported by a synthetic resin.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
